

1. Introduction

It is expected that the students explore the technologies HTML; CSS; JavaScript. To achieve this goal, students must implement a website for a scientific conference, expanding the contents used in the first work. The students can choose an event from https://www.ieee.org/conferences_events/index.html.

As this work is only for academic purposes the data to be included in the project can be fictitious.

2. Practical Work

2.1 Mandatory Sections

The website must have a minimum of 5 required sections that should be implemented according to the following rules:

- **Conference:** General information about the event (location, dates, main theme, past editions, Organizing Committee, Technical Committee, Sponsors, etc). It should include an image gallery about past editions (oral presentations, convention centers, etc).
- **Program:** This section contains the program (regular sessions, special sessions, social events, etc) as well as all the themes of the conference. The keynote speakers must also be presented.
- **Paper Submission:** In this section all information about paper submission must be provided (important dates, submission procedures, templates for paper submission, etc.).

A form to contact the organization must also be available. This form must contain some personal information of the user (name, gender, id card number, address, email, phone number) and allow the user to formulate a

specific question. The user must select the reason for contact with the following options: i) paper submission; ii) registration; iii) other questions. In the latter, an additional text input must appear in order to allow the specification of the topic.

- **Registration:** this section contains the prices of the event as well as the registration procedures. All information related with the location/facilities, transportation, contacts are also available. Here, must also be included some touristic material based on a *slideshow*.
- **Membership:** This section must allow the login of a registered user as well as the registration of new users. The authentication process must be simulated based on JavaScript.

2.1.1. Additional Requirements

- Groups of two students.
- The official language of the site must be English
- The site must be *responsive*

2.2 Templates

Students may adapt an existent template. In this situation the students must provide the original template in order to allow the evaluation of the implemented modifications.

3. Evaluation

Frameworks HTML/CSS such as Bootstrap **cannot be applied**.

Students must know the base technologies (HTML/CSS/JS) as the defense of the work will focus on these technologies. The utilization of CSS preprocessors like SASS/LESS will be awarded extra points.

3.1 Marks

This work represents 50% (10Values) of the final grade and it is mandatory.

3.2 Defense

The defense is mandatory, and will take place on the 5th of January 2024. Students must deliver the work until the 30th of December 2023.

The work must be uploaded to a cloud service as Dropbox/Google drive/... and the respective link must be sent to sparedes@isec.pt until 11:59 PM of the 30th of December 2023
