

## No projeto MAUI

Fazer copia da pasta wwwroot para raiz do projeto RCL. Apagar o index.html do projeto RCL e no projeto MAUI deixar apenas o index.html

Mover a pasta Pages para o projeto RCL

Mover a pasta Layout para a raiz do projeto RCL renomeando a pasta para Shared

Pesquisar em Gerenciador de Soluções (Ctrl+J)

Solução 'Projeto' (3 de 3 projetos)

BlazorApp

MauiApp

Dependências

Properties

wwwroot

index.html

Components

\_Imports.razor

Routes.razor

Platforms

Resources

App.xaml

C# App.xaml.cs

MainPage.xaml

C# MainPage.xaml.cs

C# MauiProgram.cs

RazorClassLibrary

Dependências

wwwroot

css

favicon.png

Areas

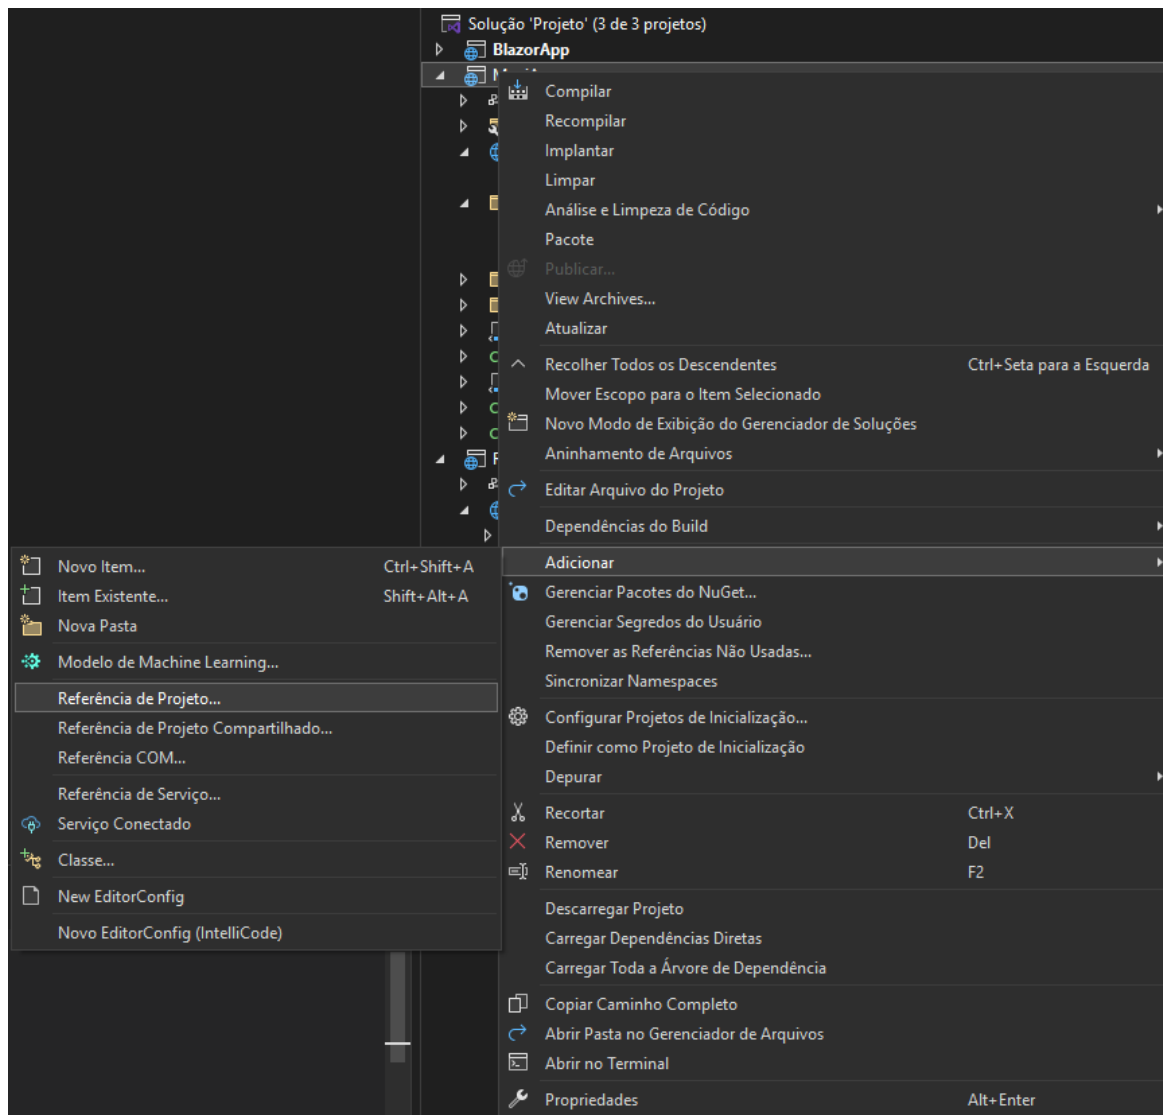

Pages

Shared

MainLayout.razor

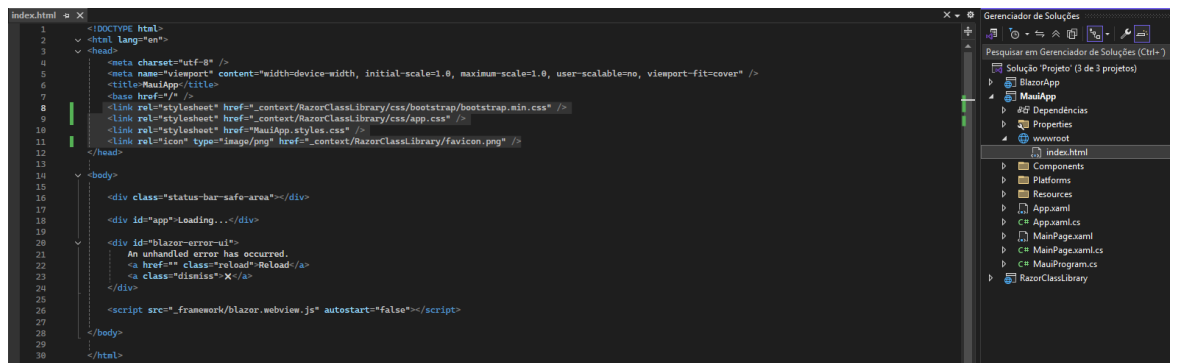

NavMenu.razor

Adicionar Referencias de Projeto do RCL (selecionar o projeto RCL -> OK)

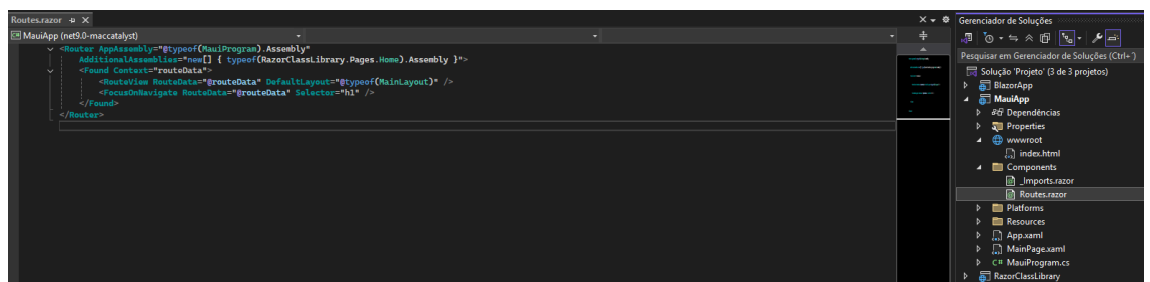

Editar o index.html e corrigir os caminhos dos ficheiros (Atenção ao caminho das pastas)

```
<link rel="stylesheet"
href="_context/RazorClassLibrary/css/bootstrap/bootstrap.min.css" />
<link rel="stylesheet" href="_context/RazorClassLibrary/css/app.css" />
<link rel="stylesheet" href="MauiApp.styles.css" />
<link rel="icon" type="image/png" href="_context/RazorClassLibrary/favicon.png" />
```

Corrigir o Routes.razor porque os ficheiros já não precisam do Layout

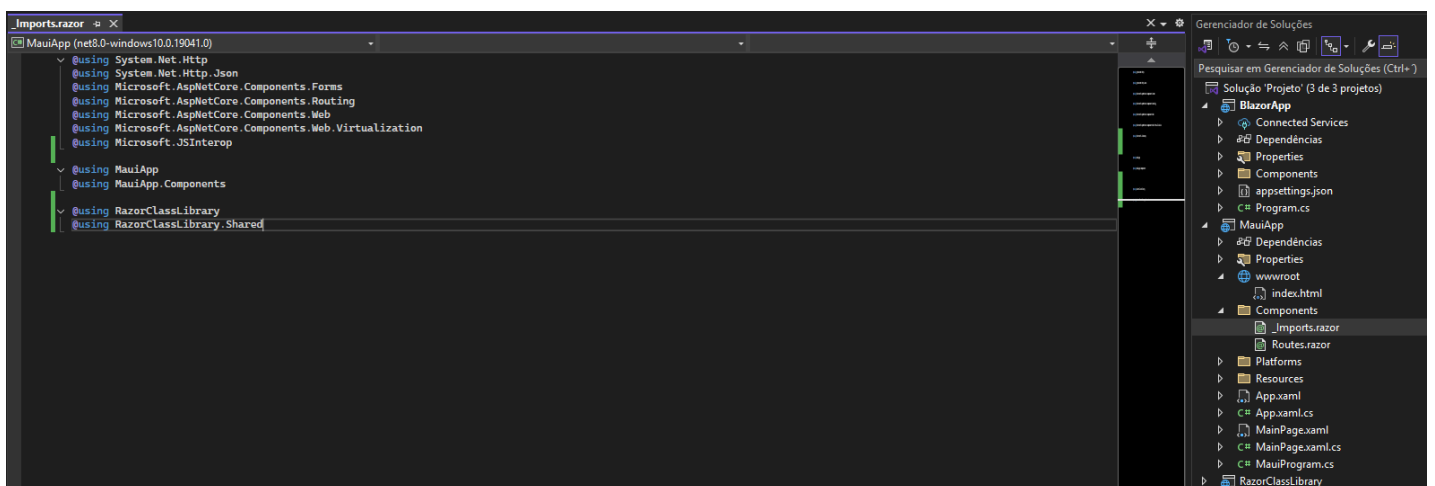

```
<RouteView RouteData="@routeData" DefaultLayout="@typeof(MainLayout)" />
```

No \_Imports.razor do projeto adicionar as seguintes linhas

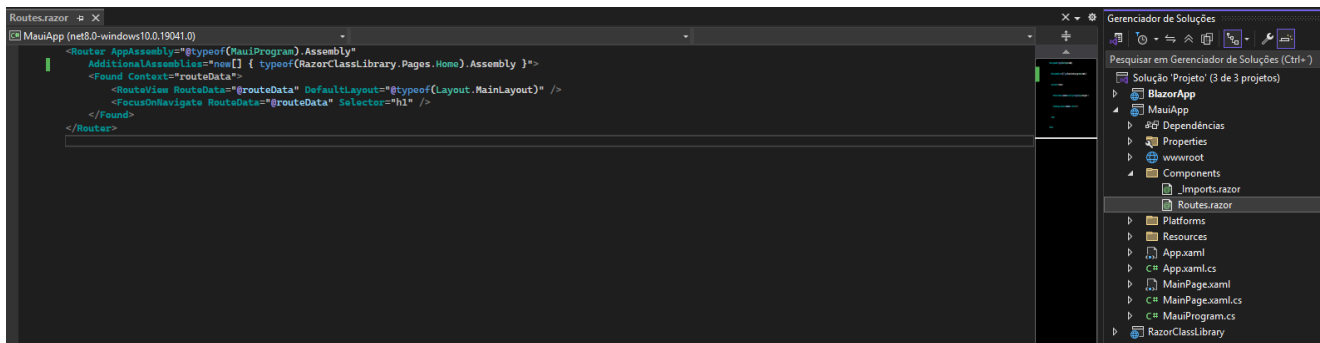

@using RazorClassLibrary

@using RazorClassLibrary.Shared

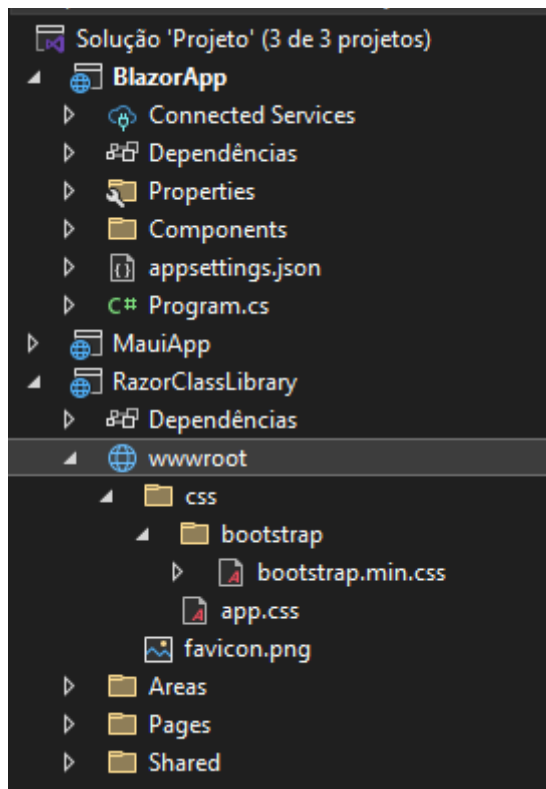

No ficheiro Routes.razor adicionar ao componente Router e remover o “Layout.”

`AdditionalAssemblies="new[] {typeof(RazorClassLibrary.Pages.Home).Assembly}"`

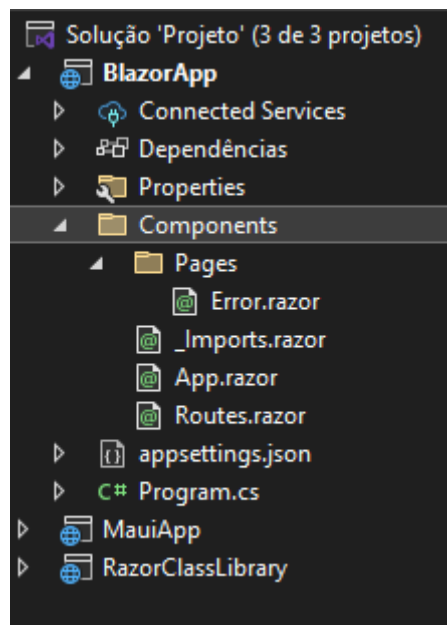

## No projeto Blazor

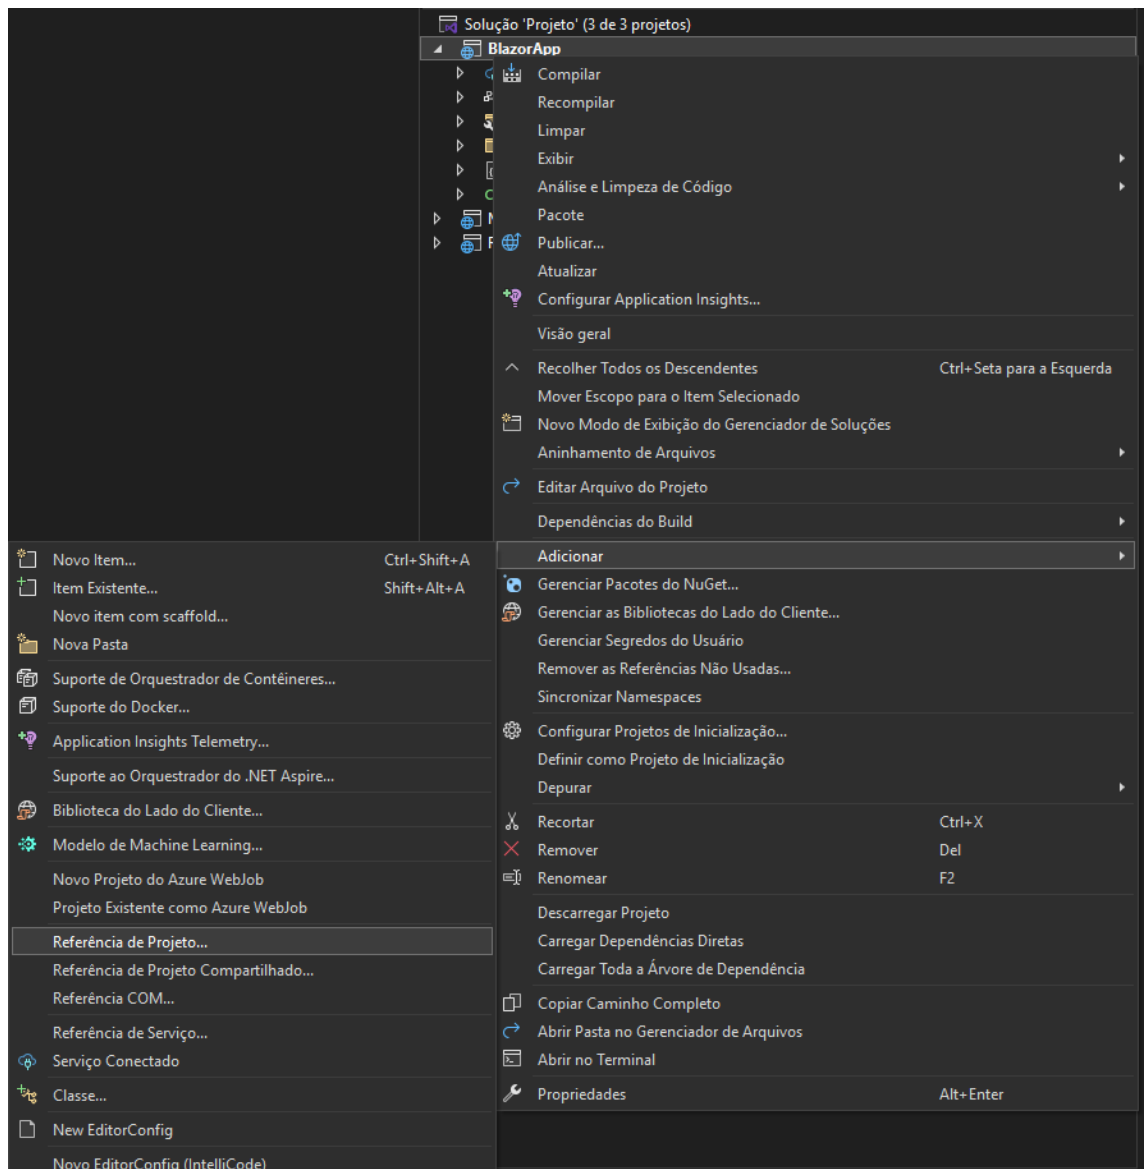

Mover a pasta wwwroot para o projeto RCL

Apagar a pasta Layout que se encontra dentro da pasta Components e apagar da pasta Pages tudo menos o Error.razor

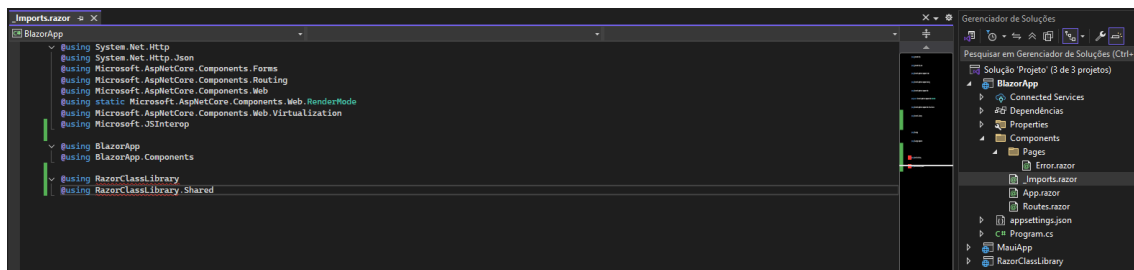

Adicionar Referencias de Projeto RCL (selecionar o projeto RCL -> OK)

No \_Imports.razor do projeto Blazor adicionar as seguintes linhas

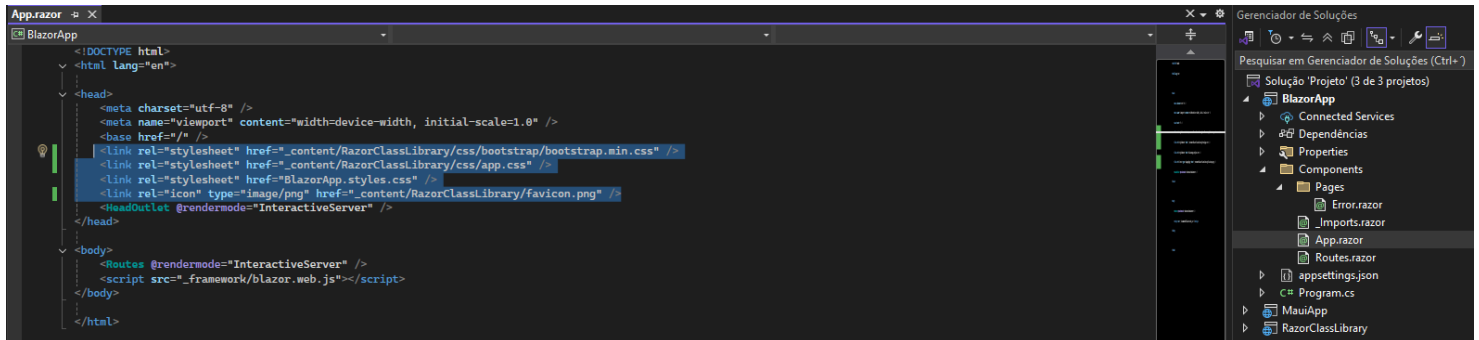

```
@using RazorClassLibrary
@using RazorClassLibrary.Shared
```

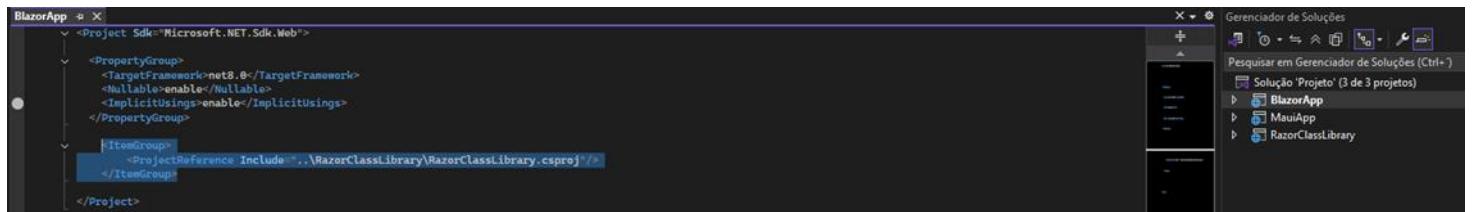

No projeto Blazor o documento App.razor temos de adicionar os novos caminhos dos ficheiros movidos (atenção ao caminho das pastas)

```
<link rel="stylesheet"
href="_content/RazorClassLibrary/css/bootstrap/bootstrap.min.css" />
<link rel="stylesheet" href="_content/RazorClassLibrary/css/app.css" />
<link rel="stylesheet" href="BlazorApp.styles.css" />
<link rel="icon" type="image/png" href="_content/RazorClassLibrary/favicon.png" />
```

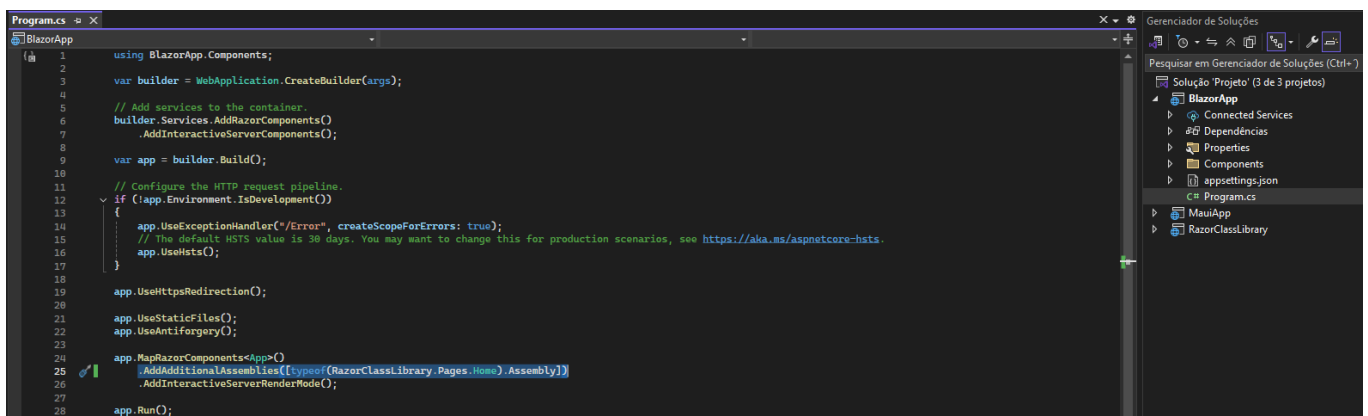

No projeto BlazorApp.csproj (double click no projeto) adicionar o *ItemGroup*

```
<ItemGroup>
  <ProjectReference Include="..\RazorClassLibrary\RazorClassLibrary.csproj"/>
</ItemGroup>
```

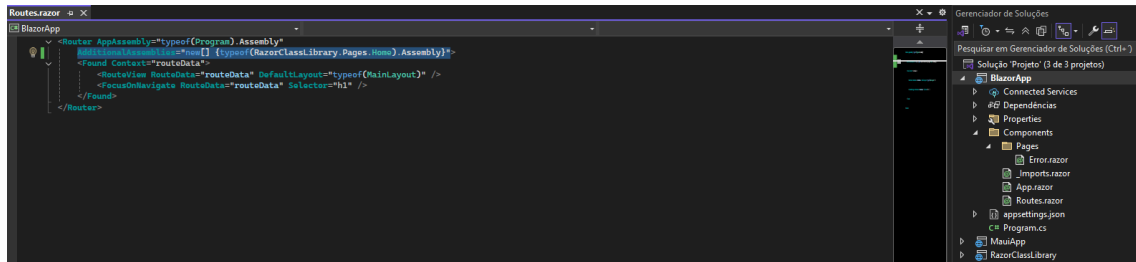

No ficheiro Program.cs adicionar a seguinte linha no local indicado

```
.AddAdditionalAssemblies([typeof(RazorClassLibrary.Pages.Home).Assembly])
```

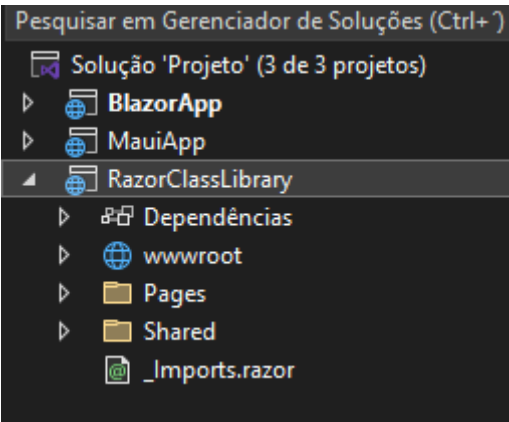

No projeto Blazor no ficheiro Routes.razor adicionar ao componente Router

`AdditionalAssemblies="new[] {typeof(RazorClassLibrary.Pages.Home).Assembly}"`

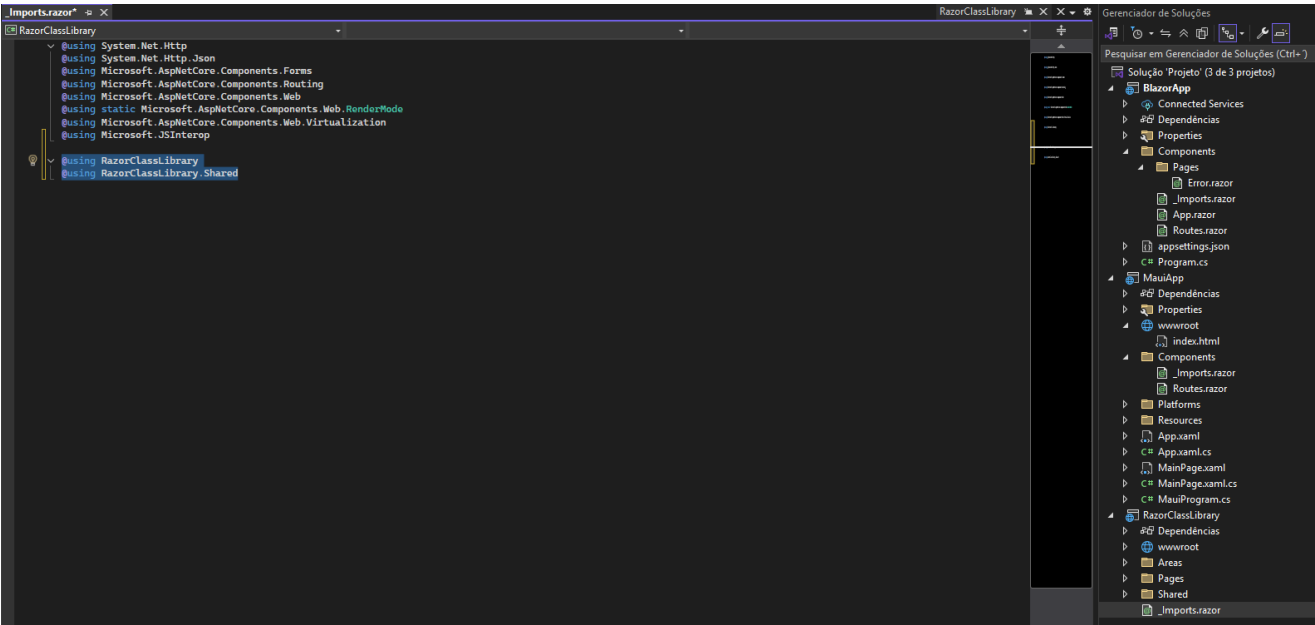

# No projeto RCL

1. Apagar a pasta Areas

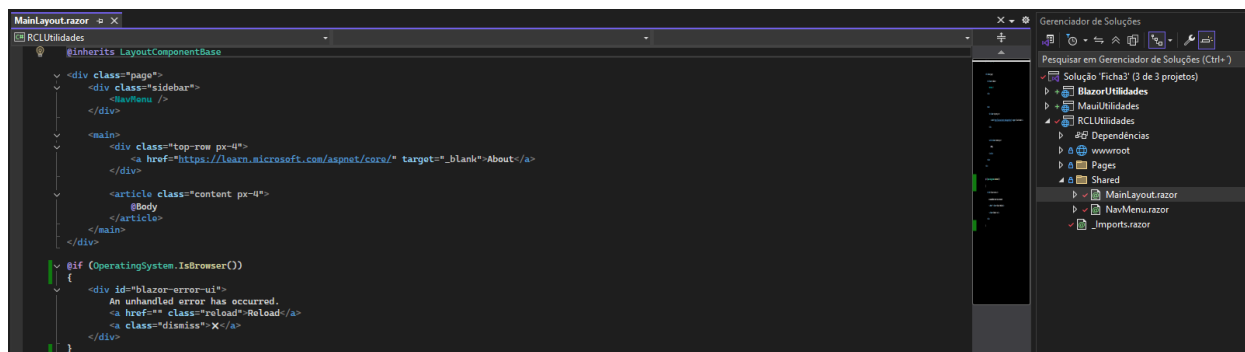

2. Copiar o ficheiro \_Imports.razor do projeto Blazor para a raiz do projeto RCL  
No \_Imports.razor do projeto RCL

| Trocar                      | Por                             |
|-----------------------------|---------------------------------|
| @using BlazorApp            | @using RazorClassLibrary        |
| @using BlazorApp.Components | @using RazorClassLibrary.Shared |

No ficheiro MainLayout.razor adicionar a seguinte div

```
@if (OperatingSystem.IsBrowser())
{
    <div id="blazor-error-ui">
        An unhandled error has occurred.
        <a href="" class="reload">Reload</a>
        <a class="dismiss">✕</a>
    </div>
}
```

No projeto RazorClassLibrary.csproj (double click no projeto) substituir o ItemGroup pelos seguintes

```
<ItemGroup>
    <SupportedPlatform Include="browser" />
</ItemGroup>

<ItemGroup>
    <PackageReference Include="Microsoft.AspNetCore.Components.Web"
        version="8.0.20" />
</ItemGroup>
```

e apagar a seguinte linha

```
<AddRazorSupportForMvc>true</AddRazorSupportForMvc>
```
