

Inovação...

... é a implementação de um **produto (bem ou serviço) ou processo novos** ou **significativamente melhorados**, de um **método novo de marketing**, ou um **método novo organizacional** nas práticas de negócios, na organização do local de trabalho ou nas relações externas.

OCDE (2005)

Manual de Oslo

Intensidade da Inovação

	Imitation	Incremental Innovation	Radical Innovation
Purpose	Create a product or service which is already present in the market but new to the customer	Create a substantially new or improved product or service	Create a new product or service which is absolutely unique in the market
Project Goals and Objectives	Clearly defined	Clearly defined	Vague and broader
Uncertainties	Low	Moderate	Higher
Approach	Reverse engineering and imitation	Improved price and performance features	Cutting edge R&D

Sergey Flippov and Herman Mooi (2010), Innovation Project Management: A Research Agenda, *Journal of Innovation and Sustainability*, 1(1).

***Creative destruction** is the dismantling of long-standing practices in order to make way for innovation and is seen as a driving force of capitalism.*

TEN TYPES OF INNOVATION

THE DISCIPLINE OF BUILDING BREAKTHROUGHS

Larry Keeley, Brian Quinn, Ryan Pikkell, & Helen Walters (2013). *Ten Types of Innovation: The Discipline of Building Breakthroughs*. Wiley. 288p.

Inovação é a criação de uma nova oferta viável.

Inovação não é invenção

A inovação pode envolver invenção, mas requer também outras coisas, incluindo uma compreensão profunda das necessidades e desejos dos clientes ou de como trabalhar com outros parceiros para a fornecer.

Inovação é a criação de uma nova oferta viável.

Inovações têm de se pagar a si próprias

Simplificando: as inovações têm de gerar valor caso pretendamos ter o privilégio de vir a gerar outras inovações. A sua viabilidade depende de dois critérios: ser capaz de se sustentar e a rentabilidade do custo do capital investido.

Inovação é a criação de uma nova oferta viável.

Muito pouco, é verdadeiramente novo na inovação

Muitas vezes, não percebemos que a maioria das inovações se baseia em avanços anteriores. As inovações não têm de ser novas no mundo — apenas para um mercado ou setor de atividade.

Inovação é a criação de uma nova oferta viável.

Pensar além dos produtos

As inovações devem ser mais do que produtos. Podem abranger novas formas de fazer negócios e ganhar dinheiro, novos sistemas de produtos e serviços, e até novas interações e formas de envolvimento entre a sua organização e os seus clientes.

A inovação requer identificar os problemas que importam e abordá-los de forma sistemática, para fornecer soluções elegantes.

CONFIGURAÇÃO

OFERTA

EXPERIÊNCIA

tipos de inovação focados no funcionamento mais íntimo de uma empresa e do seu sistema de negócios

tipos de inovação focados no principal produto ou serviço de uma empresa, ou num conjunto dos seus produtos e serviços

tipos de inovação focados em elementos mais virados para o cliente de uma empresa e seu sistema de negócios

Gartner: The Top 10 Strategic Technology Trends For 2025

Published September 10, 2024

Written By
Ben Abbott

Agentic AI, AI governance platforms and post-quantum cryptography are among the most disruptive future technology trends facing IT leaders.

Rapid advancements in AI, computing, and human-machine interaction are the key drivers behind this year's list of 10 technologies that Gartner believes IT leaders should closely monitor in 2025.

Gene Alvarez, Gartner's distinguished vice president analyst, revealed a list of technology trends likely to cause disruption in the next two to 10 years during the IT Symposium/Xpo in Australia on Sept. 10. Based on research and analyses, he said the list includes only technologies and trends that "are so significant C-level executives are saying we need to do something about this."

<https://www.techrepublic.com/article/gartner-10-tech-trends-2024/>

1. Turning AI into decision-making agents

Gartner expects Agentic AI to emerge within the next two to three years — with capabilities that go beyond tasks like summarising information to actually taking actions on behalf of individuals. Rather than presenting users with options, they will be able to choose the option that is optimal for the user if given permission.

2. Technology platforms for governing AI

Prompted by concerns such as model bias, AI governance platforms and tools are being developed to build trust through transparency and ethics into models. Alvarez explained that this will enable features like explainability of AI-generated answers and prevent harmful outputs.

<https://www.techrepublic.com/article/gartner-10-tech-trends-2024/>

3. Tools defending against disinformation

Generative AI could allow bad actors to create synthetic media, such as fake videos, voices, and images that impersonate people or organisations. Disinformation security tools will help organisations [identify deepfakes](#) or detect synthetic media by assessing truth and tracking the spread of disinformation.

4. Moving to post-quantum cryptography

[Post-quantum cryptography standards were recently released](#). According to Gartner, post-quantum cryptography will become a concern in just two to three years. IT leaders will soon need to replace every piece of encryption with a post-quantum algorithm unbreakable by classical or quantum computing.

<https://www.techrepublic.com/article/gartner-10-tech-trends-2024/>

5. Ambient wireless tags and sensors

The falling cost of wireless tags and sensors, which can track and monitor inventory, supply chain conditions, or physical assets, will soon enable organisations to access and respond to data from parts of their operations that were previously “in the shadows,” Alvarez said.

6. Exploring energy-efficient computing

Organisations may soon begin moving energy-intensive algorithms to green cloud providers, rewrite algorithms to consume less energy, or more closely monitor energy use for generative AI. Additional technologies like optical, neuromorphic, and DNA storage could create vast efficiency improvements.

<https://www.techrepublic.com/article/gartner-10-tech-trends-2024/>

7. Going hybrid with future computing

Organisations are expected to take a hybrid computing approach in the future. Alvarez said they are likely to integrate and orchestrate multiple different computing paradigms and technologies, including CPUs, GPUs, edge computing, quantum computing, optical computing, and storing information in DNA.

8. Enhancing reality with spatial computing

Spatial computing brings the physical and digital realms together into a single, unified 3D space through devices such as augmented reality headsets. Alvarez said devices and applications are being developed that could support just-in-time contextualisation for decision making in places like the manufacturing shop floor.

<https://www.techrepublic.com/article/gartner-10-tech-trends-2024/>

9. Robots that multitask

Though it will take between three and ten years, polyfunctional robots that can perform multiple functions, rather than being limited to a single task, are expected to become part of everyday life. By 2030, Alvarez said 80% of humans could be engaging with smart polyfunctional robots on a daily basis.

10. Neurological enhancement technologies

Developing technologies that can read and enhance brain functions could be used in settings including healthcare facilities to restore senses such as sight or hearing — though, Gartner says, this will not happen for at least another 10 years. Devices will range from simple wearables such as earbuds or headbands to complex integrated brain-computer interfaces.

“O nosso futuro comum”

Why Sustainability Is Now the Key Driver of Innovation

by Ram Nidumolu, C.K. Prahalad, and M.R. Rangaswami

From the Magazine (September 2009)

Summary.

When companies pursue sustainability, it's usually to demonstrate that they are socially responsible. They expect that the endeavor will add to their costs, deliver no immediate financial benefits, and quite possibly erode their competitiveness. Meanwhile, policy makers and activists argue that it will take tougher regulations and educated, organized consumers to force businesses to adopt sustainable practices.

But, say the authors, the quest for sustainability can unearth a mother lode of organizational and technological innovations that yield both top-line and bottom-line returns. That quest has already begun to transform the competitive landscape, as companies redesign products, technologies, processes, and business models. By equating sustainability with innovation today, enterprises can lay the groundwork that will put them in the lead when the recession ends.

The long read

How Nespresso's coffee revolution got ground down

<https://www.theguardian.com/food/2020/jul/14/nespresso-coffee-capsule-pods-branding-clooney-nestle-recycling-environment>

Today, some 14bn Nespresso capsules are sold every year, both online and from 810 brightly lit boutiques in 84 countries. More than 400 Nespressos are drunk every second. Hundreds of rivals and imitators have emerged,

In 1975, a young engineer named Eric Favre took a trip to Rome that would change the history of coffee. Favre had recently started working at Nestlé's headquarters in Vevey, Switzerland, and one of his first projects was to develop a machine that would combine the convenience of domestic coffee with the quality of an Italian espresso bar, where customers paid more for a product made by an expert using large, expensive equipment.

Favre's aim was to build a world in which espresso was available at home. Customers would own a machine, into which they would place a sealed pod filled with ground coffee. The pod would keep the coffee fresh. (Although roast coffee can stay fresh for weeks, ground coffee loses its freshness after about half an hour.) The capsule design would also ensure greater aeration, mimicking the repeat oxidisations at the Sant'Eustachio. After the pod was inserted, a needle-like spout would

The following year, 1976, Nestlé filed its first patent for a single-serve coffee system. “Favre is one of those people who pop up in history and do great things,”

At Nestlé headquarters in Vevey, there is a small museum dedicated to the history of Nespresso. Looking at the early prototypes on display - elaborate Rube Goldberg-type machines with outsize tanks and pumps and tubes - it is easy to see why it took 10 years after the first patent was filed for the product to come to market.

When Nespresso was finally launched in 1986, it seemed like the sceptics had been right all along. The first models were designed to resemble traditional espresso machines, bigger and clunkier than the sleek designs available today, and only four types of capsule were available, offering various strengths of coffee. Pitched to businesses in Switzerland and Japan, for offices without enough space for a full-size coffee machine, Nespresso failed to find many takers. In 1988, in a bid to rescue the product, Nestlé brought in Gaillard, a tobacco man who had created the clothing brand Marlboro Classics when he worked at Philip Morris. Gaillard would work alongside Favre, but his brief was clear: if he couldn't turn the ship around, it would be

▲ Jean-Paul Gaillard, former head of Nespresso and later founder of its rival Ethical Coffee Company, in 2010. Photograph: Philippe Desmazes/AFP/Getty Images

Under Gaillard, Nespresso would be transformed from an office coffee company into a luxury brand, the look and feel of which would be as much a part of the product as the beans themselves. “I wanted to create the Chanel of coffee, and decided to keep it chic and bobo,” [he said](#) in a 2010 interview.

He cut the price of the machines and licensed them to third parties. The [first home machines](#) had been made with one firm, Turmix. Later, you could buy a Krupps or Alessi Nespresso machine. These brand associations gave Nespresso familiarity in local markets, and encouraged fancy shops such as Harrods to stock them. Gaillard also overhauled the capsules, reducing the aluminium content and putting up the price by 50%. Most importantly, he began marketing Nespresso to individual consumers, rather than to businesses, through the new Club Nespresso. It was no longer just a better coffee for your office – it was a way of life.

Jean-Marc Duvoisin became CEO in 2013, and was charged with taking Nespresso to a new era, leaving the patent disputes behind. From a closed, Apple-type system - Nespresso products for Nespresso machines - the company had to move to a more open, Android-type model. “There are going to be rival capsules,” Duvoisin told me. “We need to leverage our strengths: knowing our customers, and knowing our farmers.” Having worked for 40 years to be the only coffee-pod system in town, the company had to pivot to arguing that its capsules - made from strong, light aluminium, and filled with high-quality, responsibly farmed coffee - were the best on the market. Eight years on from Nespresso’s *annus horribilis*, its biggest problem is the aluminium itself.

In the past decade, consumers have grown increasingly concerned about the sheer amount of waste caused by coffee pods.

“The business model of the future is not in grand statements about what companies will do,” says Tima Bansal, a professor at Ivey Business school in Canada who specialises in sustainability. “It’s about waste measurement and transparency. If someone measured the garbage I put out on the lawn, I’d behave differently.” Bansal was mystified as to why Nespresso didn’t provide more detailed public data, such as regional breakdowns, about how its capsules are recycled. “With their competitive advantage, they could be a model of sustainability, leading the circular economy,” she said. “But once you lose your way, the competition makes it really scary.”

FORBES VETTED

The Best Nespresso Machines To Make Barista-Quality Drinks At Home

Laura Denby Contributor

Forbes Vetted Contributor Group ©

Dec 5, 2022, 11:59am EST

With one of the best Nespresso machines, you can enjoy barista-quality lattes, espressos and Americanos at home—all without changing out of your pajamas. Sure, you can always invest in a classic [espresso machine](#), but Nespresso machines are designed with convenience in mind. Like [Keurig machines](#), Nespresso models brew coffee drinks using a pod-based system. So, to indulge in your favorite beverage at home, all you have to do is insert your favorite pod, select your drink of choice and wait a few minutes—or even mere seconds.

PATENTED VERTUO CENTRIFUSION™ TECHNOLOGY ENSURES A PERFECT CREMA

Thanks to the patented Centrifusion™ technology of the VERTUO capsule machine, the coffee capsule is rotated at up to 7000 revolutions per minute in the machine head. This ensures that after brewing you will find the best crema and even the last drop of aroma in your cup or mug. The intelligent barcode recognition ensures that each capsule form receives an optimally adapted extraction. Water volume, water temperature or rotation speed of the capsule are just a few of these important brewing parameters, we are taking in account on the way for the perfect coffee crema. The light on your capsule machine indicates that the capsule has been recognized and the brewing process has begun. With the new VERTUO capsule machines you experience the redefinition of coffee enjoyment up close - no matter which coffee specialty you are preferring the most.

Since the VERTUO extraction process is started with the one-touch function, you are only a button away from your next, unforgettable coffee moment – at any time of the day.
